Estimated start date: \_\_\_\_\_

#### Solar Panel Installation Details:

Location: \_\_\_\_\_

- Attached is a photo and diagram of the proposed location of the solar panels
- Attached is the installer's information

#### Solar Panel Guidelines

The Washington State RCW 64.38.055 permits some regulation by the Association. The Association can require compliance with building codes, unobtrusive placement, painting, camouflage and other reasonable measures to ensure the safety of the installation and minimize the visual effect on the community:

1. Solar panels cannot rise above the roof line.
2. Attachment of solar panels on the slope of the roof facing a street is allowed only if:
  - a. The solar panel conforms to the slope of the roof.
  - b. The top edge of the solar panel is parallel to the roof ridge.
3. Street-facing solar panels are acceptable only if necessary, for optimal solar orientation
4. The solar panel frame, support bracket, or any visible piping or wiring must be painted to coordinate with the roofing material.
5. Owner or resident must shield a ground-mounted solar panel if shielding the panel does not prohibit economic installation of the panel or degrade the operational performance quality of the panel by more than ten percent.
6. The device is of a color, which is reasonably compatible with the color and materials of the home.
7. Panels must be maintained in good condition or they will be required to be removed.
